Redpanda Data

Job Application for Analytics Engineer

Dear,

About Me

I'm a Belgian computer scientist who moved to Oslo with my Norwegian girlfriend in September. I am writing a report on my research that I'm wrapping up this year. Nonetheless, I'm looking to start a full-time position as an analytics engineer as soon as possible. In my free time I like to go rowing with my club, lift weights in the gym, play instruments, follow Norwegian courses or be out for a drink. When the winter comes, you'll most likely see me hanging around in the mountains. The people I meet describe me as energetic, easy going and dependable.

Why Redpanda?

I'm a passionate traveller that likes to work from different places around the globe. I can see my family in Belgium, be with my partner in Norway and visit friends all around the world without taking up any vacation days.

The part-time job at FibriCheck made me fall in love with the Analytics Engineering role. I thoroughly enjoyed interacting with different departments, pooling our skill-set to create advanced insight's into the companies financials and finding user patterns. I'm young, energetic and like to take initiative. These traits were positively received at FibriCheck, and I think these will be met with the same positivity at Redpanda.

The role fits my competences perfectly, considering all the job listings I've seen so far, this is the role that will perfectly combine my data analytic skills with my machine learning education.

Why Me?

I'm an eager learner that can adapt and pick up new knowledge quickly. I fit in any team, I'm an excellent communicator, deliver on deadlines, and I'm highly dependable. My bachelor and master have prepared me for the requirements of this position, I comprehend the inner workings of relation and non-relational database systems and have a strong work ethic. I have excellent knowledge of python, SQL, C, C++, Java and Prolog. Next to my studies I worked as a data engineer at FibriCheck. Here I created a data analytics dashboard from scratch and set up a data warehouse while also reporting KPIs and generating advanced insights for c-level management. The skills I acquired during my time at FibriCheck in combination with my education should make me an ideal candidate for the analytics engineer position. I've attached reference letters from colleagues during my time as data analyst at FibriCheck.

Sincerely,

Bisschops Lode
