Tibber

### Job Application for Data Scientist

Dear Ms. Marynova,

## About Me

I'm a Belgian computer scientist who moved to Oslo with my Norwegian girlfriend in September. I am writing a report on my research that I'm wrapping up this year. Nonetheless, I'm looking to start a full-time position as an analytics engineer as soon as possible. In my free time I like to go rowing with my club, lift weights in the gym, play instruments, follow Norwegian courses or be out for a drink. When the winter comes, you'll most likely see me hanging around in the mountains. The people I meet describe me as energetic, easy going and funny.

## Why Tibber?

After an internship, I got hired for a health tech startup called FibriCheck where I fell in love with the startup culture. I've been on the lookout for similar jobs In Norway for a while and finally came across Tibber.

Reading through the way Tibber words its story and looking at the fun pictures on the website, I see a place where I'd fit right in. The team looks to be a collection of positive, open-minded people who (unlike their goofy outfits suggest) are filled with ambition. In the last 10 years I've worked many side-hustles, I know the type of people that make me glow and motivated, and I'm certain I'll find those same people at Tibber.

Making a sizeable contribution to the world has been high on my priority list for a while. Data and IT are a powerful force that can be leveraged to do as much good as it can do evil. Using my skills and time to decrease our obscene energy demand in an intelligent manner, that empowers the consumer, is a story I would love to take part in.

## Why Me?

I know you're looking for candidates with more professional experience than me, but I believe my story at FibriCheck in combination with my personality make me a very strong candidate nonetheless. ( I promise I'm more interesting than I look ).

I'm an eager learner that can adapt and pick up knowledge quickly. I would fit in great with the Tibber team, you can expect me to deliver on deadlines, be highly dependable, and an excellent communicator to both technical and non-technical colleagues.

My master in AI has taught me a plethora of machine learning models and data mining techniques that I've implemented in Python (NumPy, Pandas, Scikit-learn). Furthermore, algorithms and optimization have been a prime topic in most of my courses, and although I have no previous experience with thermal models, I have a strong science background and pick up complex matter very quickly.

This opening is my dream job, starting a data science career at Tibber would put an unbreakable smile on my face.

If you have any questions regarding my application, feel free to call the number in the header.

Sincerely,

**Bisschops Lode**
